DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: on page 7, line 14, reference # 26. Correction is required.

Claim Rejections - 35 USC § 112

2. Claims 13-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 13, line 5, the expression "the source of pressure" lacks antecedent basis.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Herzog in view of Kirchner et al.

Herzog discloses a spraying device 10 mountable on a truck 12 comprising:
an engine 24 having an exhaust pipe 26;
a storage tank 14 under pressure during operation;

Art Unit: 3752

a first line 60 for connecting the exhaust pipe 26 to the storage tank 14 and serving as a source of pressure;
a second line 71 for connecting the storage tank 14 to a nozzle 91; and
a pressure relief valve 43;
and operating pressures of up to 35 PSI.

However, Herzog fails to disclose a tack material for spraying. Kirchner discloses a tack spraying apparatus 10 for mounting on a tanker trailer 12. It would have been obvious to one having ordinary skill in the art to have provided the device of Herzog with a tack material for spraying as suggested by Kirchner, since it would provide a way to distribute bituminous products to road surfaces (column 1, line 11).

With respect to claims 7, 10, 19 and 21, Herzog in view of Kirchner disclose the claimed invention except for nominal orifice diameters. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to have provided the nozzle of Herzog in view of Kirchner with a required nominal orifice diameter, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

Conclusion

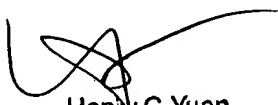

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to show the art with respect to tack spraying apparatus: Cederstrom, Gray, and Neal.

The 5,009,547's to Clark discloses a movable apparatus for spraying a tack material on to a surface with a tank 15 being pressurized by an exhaust pipe 21.
